

Making Your First Workspace

1. Open the **Making Your First Workspace** from Examples > AdaCAD Templates.
2. Explore the template by changing the **parameters** of any operation.
3. Swap out an **operation** by replacing one operation with another in the same category (i.e. **structure**, **transformation**, and **cloth**).
4. Change the color sequences of the warps/wefts by modifying the **seed draft** connected to the materials and systems inlet on the **set materials and systems** operation.

Review all of the AdaCAD operations in our documentation:

The User Interface

An **operation** is a reusable transformation: feed drafts through **inlets**, adjust **parameters**, and output a new draft at its **outlet**. Link operation to form a **dataflow pipeline**.
